

SUPERMAX - SpiderCool User Comments

"I have a Haas VMC that I purchased with their P'Cool option. It turned out to be a lot more useful than I thought. When I heard about SpiderCool I immediately had one installed on my Supermax Rebel. I have since purchased 3 new, larger, Supermax VMCs and was not hesitant to have SpiderCools installed as soon as they arrived!

"SpiderCool definitely provides a competitive edge."

"Hi. I'm Ron Williams from Renchel Tool and I've known Gary from SpiderCool for years. He first told me about their SpiderCool product several years prior to purchasing my 4 SpiderCools in November of 2005. More time is wasted manually adjusting and readjusting coolant lines than most shops realize!

"I only regret that I waited 3 years to purchase SpiderCools"

"Our Supermax 1020A is a fairly large machine making it inconvenient to reach inside the enclosure to adjust coolant loc-lines, especially with the doors open and coolant splashing on the machinist. Our tool lengths vary significantly and with SpiderCools' automatic adjustment located on the control's panel, we have precise coolant positions for every tool, instantly and automatically, as they are loaded into the spindle by the ATC. This saves time and increases tool life"

"We are confident we made the right decision and are quick to recommend SpiderCool to our friends and customers".
